

Wildlife diseases

Lectures are about:

- wildlife diseases of amphibians, reptiles, birds and mammals
- other factors causing population declines
- how the diseases are spread and how they effect populations
- our research topics

Practicals in the form of a field trip:

- two-day stay in picturesque village „Salaš“ in Chřiby mountains
- lessons on methods of capture and sampling of various animals
- bat detections in the evening and optional trip to beaver dams
- collected samples are used for further research
